

Production Cutting Tools

Wood, Plastic, Composite, Honeycomb, Aluminum

TAKE IT ON

YOUR CHALLENGES, OUR EXPERTISE.

comprehensive training

Increased productivity equals lower cost, improved profitability, and ultimately, survival of your business in today's competitive environment. **The LMT Onsrud Team** will work with all levels of your operation to increase your productivity. All levels of training, general to production-specific on the shop floor, are only a call away!

factory technical support

LMT Onsrud provides your business with access to our staff of highly trained professional factory technicians. We can assist you with those difficult production machining problems while increasing your performance and productivity.

on-site trouble shooting

Correct tool selection, proper hold-down techniques, faster feed rates, fewer and quicker set ups are all pieces to the productivity puzzle. **The LMT Onsrud Team** offers tailored solutions for problem solving and productivity gains.

custom tool design

Not only does LMT Onsrud offer the largest selections of cutting tools for day to day operations, but we will also design a tool for your specific application or material. We will take your tool requirements from the drawing board, to sophisticated computer-aided design, to in-house testing on our CNC router and CNC Mill. Custom tooling made to meet your productivity goals.

TAKE IT ON

Production Cutting Tools

LMT Onsrud has been TAKING ON challenging materials for over 70 years. As materials have changed so has LMT Onsrud's geometry and product diversification. We take pride in manufacturing tooling for CNC routers and CNC machining centers. Wood, Plastic, Aluminum, Composites, Honeycomb, natural and man-made materials – LMT Onsrud has a solution.

10-00

Single Flute - High Speed Steel O Flute Straight

Combines an open flute design with single flute geometry to provide optimum chip removal at fast feed rates. Excellent for hand-fed operations.

Usage ABS, polycarbonate, polyethylene, PVC, polypropylene, polystyrene, extruded acrylic, HDPE, UHMW, and natural wood

Material **SW** **SP** See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL
10-00	1/16	3/16	1/4	2
10-01	3/32	3/8	1/4	2
10-02	1/8	3/8	1/4	2

10-22	3/16	3/4	1/4	2
10-07	1/4	1	1/4	2-3/8
10-78	1/4	1-1/4	1/4	2-5/8

11-00

Single & Double Flute - High Speed Steel O Flute Straight

Designed for cutting softer more flexible plastics. Single flute for faster feed rates. Double flute for smoother finish. Excellent for hand-fed operations.

Usage ABS, polycarbonate, polyethylene, polystyrene, PVC, polypropylene extruded acrylic, HDPE, UHMW

Material **SP** **HP** See Selection Guide - pg. 2 - 12

Single Flute

Double Flute

11-74*	3/8	1	3/8	3-1/2

*These tools are designed and toleranced for Air Routers with guide bushing.

Single Flute - High Speed Steel Dor-Bits

Designed to rout steel doors.

Usage Metal clad doors
(15-50 and TIN15-50)
Fiberglass doors (TIN15-50)

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Door Machine
15-52	1/2	2-1/4	1/2	5-1/4	RUVO

TIN15-61*	1/2	2-1/2	1/2	5-1/2	

*HAVE FLATS

Three Flute - High Speed Steel TIN Coated CNC Dor-Bits

Downcut tools designed specifically for machining metal clad doors in a CNC environment. The tool geometry facilitates piercing steel and produces a superior cut for door lites and hardware openings.

Usage Metal clad or fiberglass doors

Material  See Selection Guide - pg. 2 - 12

TIN COATED

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Door Machine
TIN15-75	1/2	3	1/2	6	KVAL

HELIX ANGLE $\approx 18^\circ$

Single Flute - High Speed Steel Straight Pilot

Straight flute tools with boring points and pilots are the workhorse of the mobile home, modular home and RV industries.

Usage Wood panels, vinyl coated panels, wall board and aluminum layered materials

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL
18-00	1/4	3/4	1/4	2-3/4
18-02	3/8	7/8	3/8	2-7/8

20-00

Single Flute - High Speed Steel Downcut Spiral Pilot

Spiral tools designed to push chips away from the operator in mobile home and RV manufacturing plants.

Usage Aluminum and plywood sandwich panels, vinyl coated panels, wall board, drywall and layered material

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL
20-00	1/4	3/4	1/4	3
20-02	3/8	1	3/8	3-7/16
20-03	1/2	1-1/4	1/2	4

HELIX ANGLE $\approx 21^{\circ} - 38^{\circ}$

20-10

Single Flute - High Speed Steel Drywall Bit

Spiral flute tools designed to make cut outs in drywall. Used in manufactured housing and on site construction.

Usage Drywall cut outs

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL
20-10	3/16	1	1/4	3-1/4
20-11	1/8	3/4	1/8	2-1/2
20-15	1/8	1	1/8	2-1/2

HELIX ANGLE $\approx 30^{\circ} - 41^{\circ}$

27-00

Single Flute - Solid Carbide Laminate Trim

Designed to trim counter tops. The pilot bears on the finished surface and acts as a guide to trim flush or with a bevel. Available with boring point if necessary to plunge and rout.

Usage Trimming laminate counter tops and trimming plastic parts

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Style
27-00	1/4	1/4	1/4	1-1/2	Flush
27-01	1/4	1/4	1/4	1-1/2	7° Bevel
27-03	1/4	3/8	1/4	2	Flush

27-50

Double Flute - Solid Carbide Laminate Trim

Tools with a pilot designed to give a satin smooth finish when trimming laminate counter tops.

Usage Trimming laminate counter tops and trimming plastic parts

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Style
27-50	1/4	7/16	1/4	1-5/8	Flush

Solid Carbide Double-Bearing Plastic Trim

Spirals designed to trim stacked sheets of plastic in hand-fed applications. They use a double bearing guide to ensure smooth cutting action around a template.

Usage Trimming stacked sheets of plastic & laminates

Material **SP** **HP** See Selection Guide - pg. 2 - 12

Double Flute

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Flute
28-20	1/4	3/4	1/4	3	2
28-25	1/2	1-1/8	1/2	4	2

HELIX ANGLE ~ 11° - 30°

REPLACEMENT BEARING KITS FOR SERIES 28-20 Solid Carbide Double Bearing Plastic Trim Tool Kits

28-89	KIT for 28-20 Tool
28-88	KIT for 28-25 Tool

Carbide Tipped Flush Trim

Designed to provide a smooth finished edge on dense, abrasive and laminated materials. A ball bearing guide assists free cutting action. Excellent for hand-fed applications.

Usage Natural wood, wood composites, laminated and veneered

Material **SW** **HW** **CW**
LW **SP**
See Selection Guide - pg. 2 - 12

Double Flute Three Flute

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Flute
28-55	1/4	1	1/4	2-1/2	2
28-51	3/8	1/2	1/4	2-1/4	2
28-50	3/8	1	1/4	2-3/4	2
28-53	1/2	1/2	1/4	2	2

28-54	1/2	1	1/2	3-1/4	2
28-63	1/2	1-1/2	1/2	4-1/4	2
28-64	1/2	2	1/2	4-1/4	2

REPLACEMENT BEARING KITS FOR SERIES 28-50 Solid Carbide Double Bearing Plastic Trim Tool Kits

28-80	KIT for 1/4" Cutting Dia
28-79	KIT for 3/8" Cutting Dia
28-78	KIT for 1/2" Cutting Dia

Double Flute - Carbide Tipped Chamfer

Provides a beveled or decorative edge on finished parts.

Usage Natural wood and wood composites

Material **SW** **HW** **CW**
See Selection Guide - pg. 2 - 12

Part Number	Bevel	LoC	SHK DIA	OAL
29-51	45°	1/2	1/4	2

HSS Hollow Core Cutters

This specialized cutter is designed to vertically cut the honeycomb cells producing a clean, flag free edge. The core material will remain attached at the bottom and can be removed using one of our valve style honeycomb cutters. This product along with our 31-100 or 30-000 series tools is an effective combination to create pockets in honeycomb core and get a perfectly clean edge.

Usage Honeycomb

29-000

Diamond Grit Hogger

Diamond grit hoggers are used on abrasive cores (graphite, phenolic, or fiberglass) in order to achieve long tool life. The tools are available in a ball nose version and as a traditional hogger capable of holding existing honeycomb blades. A 35% weight reduction has been designed into the larger diameter tools resulting in better performance on 3 or 5 axis machines. **Note:** Cutting blades sold separately.

Usage Honeycomb

Note: 30% - 50% max radial engagement.

Solid Carbide Honeycomb Hogger (Coated)

Designed to be a versatile tool and cut most honeycomb core materials. The solid carbide body offers long tool life while the proven hogger geometry shreds the core and evacuates chips. The long flute length allows for deep pocket applications and can also be used to surface large areas. Hoggers are coated with ZRN.

Usage Honeycomb

Replaceable Ring Type Honeycomb Cutter

These tools are for contouring, carving and chamfering cuts of .25" or less. The unique patented holding system prevents the solid carbide blades from coming out of the holder if it is fractured.

The HSS saw blades and the diamond plated blades dish on the bottom so they clear the cut core finish like the hollow ground solid carbide style rings. The solid carbide rings may be reground several times at LMT Onsrud making them very economical to use.

The HSS saw and diamond plated blades are disposable, offering the convenience of a constant diameter.

Note: Cutting blades sold separately.

Usage

For contouring, carving and chamfering cuts

HSS Integral Shank Honeycomb Hogger Cutter

The spiral hogger geometry ground integral to the shank allows for faster feed rates and deeper cuts than any previous cutter. The availability of several different blades makes this cutter suitable for most core types. The hogger design also imparts less force as it evacuates and shreds scrap.

Note: Cutting blades sold separately.

30-300

Usage CNC machining of honeycomb core

Reduced Weight Honeycomb Cutter

35% weight reduction has been designed into the larger diameter tools resulting in better performance on 3 or 5 axis machines. Part lifting and flagging have also been reduced due to the new tooth and flute design. Existing honeycomb blades will mount on these hoggers.

Note: Cutting blades sold separately.

Usage CNC Machining of Honeycomb Core

30-700

¹ = 50mm diameter honecomb blade

See page 25 for Images of Cutting Blades

31-000**High Speed Steel Cutter**

Designed primarily for use on aluminum core, offering the versatility of smaller sizes for use on hand-held machines in field or maintenance type repairs. This cutter offers the strength of an integral shank and blade that has an edge sharpness unattainable with any other material. This sharpness and the relieved bottom yield part surfaces that require a minimum of preparation before bonding operation.

Usage Aluminum Core

31-108TCN	3/4	1/4	3

Cutting Blades for Cutters and Hoggers

HSS Three Piece Honeycomb Hogger (Coated)

Designed with more aggressive hogger geometry than the 32-000 series. Both the hogger and blade with teeth have a fine tooth grind pattern resulting in increased feed rates and improved part finish. All hoggers and blades are coated with a ZRN coating for increase in tool life. All hogger assemblies require a shank, a hogger and a blade. This design also allows the tool to be use without the hogger by replacing the hogger with a spacer.

Note: Hoggers, Arbors and Cutting Blades Sold Separately.

Usage Fast removal of excess core

32-201 - Wrench for 32-200 Tools (for Shank Diameters 1/2" & 5/8")

32-202 - Wrench for 32-200 Tools (for Shank Diameters 3/8")

32-205 - Keystock Replacement

See page 25 for Images of Cutting Blades

Aircraft Panel Tools

This modular tool is designed to produce slots in composite panels so potting compound can be applied to strengthen the edge. This tool consists of a PCD arbor which accepts a diamond grit or HSS under cutting tool to be screwed into it.

Usage HCC Panels

Part Number	Cutting DIA	LoC	SHK DIA	
34-008	1/2	-	1/2	Arbor (non-cutting)
34-010	1/2	1/4	1/2	PCD Arbor

34-050	7/8	0.630	n/a	HSS Cutter

34-000

Potted Fastener Tools (Coated)

NEW

The tool was designed to eliminate the inconsistencies in producing the holes in aircraft interior panels to mount potted, glued in, fasteners. This tool for composite panels will plunge and shred the HCC. In aluminum panels an entry hole is required but the HCC shred is clean and effective. Coated for increased tool life.

Usage Honeycomb Panel

Hole for Fastener Produced

HELIX ANGLE $\approx 30^\circ$

52-900

Three Flute - Solid Carbide Straight

Designed for routing extremely hard materials or when spindle RPM is lower than normal for routing.

Usage Composites

Material **CP** See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL
53-080	1/4	3/4	1/4	2-1/2

53-000

Three & Four Flute - Solid Carbide Spiral for Glass-Reinforced Plastic (Coated)

Updated line of three and four flute tools for machining glass-reinforced plastic. Geometry has been optimized to shear the glass fibers while creating a chip which removes heat from the cut to avoid melting of the material. Tools are coated to withstand the abrasive characteristics inherent to glass-reinforced plastic (GRP).

Usage Fiberglass and Composites

Material **CP** See Selection Guide - pg. 2 - 12

NEW

Double Flute - Polaris Compression Spiral

The Polaris Compression Series is the latest advancement in technology and design by LMT Onsrud, the innovator of compression spiral tooling. The enhanced tooling geometry improves cut quality while achieving maximum productivity. Superior coating adhesion and performance is achieved through a precoating process that ensures the durability of the advanced coating and your cutting edge for maximum tool life. Learn more at Onsrud.com/Polaris.

Usage High pressure laminates, double-sided laminates and veneered wood composites

Material **CW SW HW LW MT**

See Selection Guide - pg. 2 - 12

Double Flute - Solid Carbide Compression Spiral

The Tuff Core is an innovative line of solid carbide compression spirals that utilize unique dual grade carbide. The harder outer shell is reinforced by a tough inner core which makes the tool stronger and reduces tool breakage.

Usage Double sided laminated, and veneered materials

Material **CW SW HW LW MT**

See Selection Guide - pg. 2 - 12

Single Flute - Solid Carbide Upcut Spiral O Flute for Acrylic

These tools are designed to cut acrylics and achieve long tool life. Our unique cutting geometry produces a smooth edge finish regardless if it is cast or extruded acrylic.

Usage Acrylic

Material **SP** **HP**

See Selection Guide - pg. 2 - 12

NEW

DFC Low Helix Finisher - Upcut

These tools produce superior edge quality and finish in carbon fiber materials at high feed rates. The Multi-Flute design cuts quieter and faster than a typical two or three flute PCD tool in carbon fiber. DFC coated.

Usage Composite & Fiberglass

Material **CP**

See Selection Guide - pg. 2 - 12

NEW

DFC Low Helix Cutter - Upcut

Tool to be used as a rougher or finisher in carbon fiber laminates in tight tolerance applications. Low helix and optimized rake angles cleanly shear composite fibers to prevent delamination. Diamond coated (DFC) for increased tool life.

Usage Composite & Fiberglass

Material **CP**

See Selection Guide - pg. 2 - 12

Solid Carbide Fiberglass Router

Designed as fiberglass routers. Their upcut/downcut diamond design effectively shears fibrous materials. Certain tools in the line have been further developed to cut aramid fiber composites.

Usage Fiberglass and composites

Material  See Selection Guide - pg. 2 - 12

67-220

Three Flute

Three Flute - PCD Progressive Chipbreaker for Composites

Provides superior chip control and increased tool life when cutting dense and abrasive materials. The new chipbreaker incorporates a unique geometry with a PCD cutting edge to support a wide range of feed rates and depth of cut combinations while extending the life of the tool. This is accomplished by utilizing a distinct Hi-Low asymmetrical chipbreaker profile which reduces vibration and chatter, caused by harmonic imbalance, resulting in improved surface finishes, while reducing noise levels and wear on the tool.

Usage Composites and phenolic

Solid Carbide 8 Facet Drill

Designed to reduce cutting forces and eliminating delamination when exiting the material.

Usage Composites, Carbon fiber, mechanical plastics, and fiber reinforced plastics

Material **CP** **SP** **HP**

See Selection Guide - pg. 2 - 12

What is an 8 Facet Drill?

An 8 facet drill consists of 4 cutting edges with 2 facets per cutting edge. These facets consist of the lip relief and the lip clearance angle.

68-000

Single Flute - PCD Compression Tool

This economical PCD compression tool will provide long tool life in abrasive wood products. Mortise tip allowing for through cuts and dado's to be produced using one tool. The compression design ensures chip free edges on the top and bottom.

Usage Composite & natural woods

Material    
See Selection Guide - pg. 2 - 12

L = Left Hand Rotation

* = Tools are not stocked and must be special ordered. Approx. 4 week lead time.

68-100

68-200**Double Flute - PCD SERF™ Cutter**

This tool is designed to act like a rougher and finishing tool in one. The unique geometry reduces the cutting forces resulting in longer tool life, higher feed rates and reduced noise.

Usage Composites and fiberglass

Material  See Selection Guide - pg. 2 - 12

**METRIC (All dimensions in mm)**

NEW

PCD 8 Facet Drills

The PCD 8 facet drill works well in composite material where long tool life and a delamination free hole is required. The drill diameters are oversize allowing for aircraft fasteners to extend through the holes.

Usage Composites

Material **CP** See Selection Guide - pg. 2 - 12

What is an 8 Facet Drill?

An 8 facet drill consists of 4 cutting edges with 2 facets per cutting edge. These facets consist of the lip relief and the lip clearance angle.

Part Number	Cutting DIA	LoC	SHK DIA	OAL

Solid Carbide Boring Bits

Two style of tools are available in this series. The brad point drill is designed to cut blind holes and produce a clean edge on the top surface. The 60° through drill is designed to produce through holes while providing clean edges on both sides.

Usage

Wood

Material

SW HW CW LW

See Selection Guide - pg. 2 - 12

Through Hole
Brad Point

Hinge

BRAD POINT - designed to produce a blind hole while preventing fraying on the top edge.

Double or Three Flute Solid Carbide Taper Tools

The taper tools are available with a variety of taper angles and come standard with a ball nose point. The tools are designed to produce a good edge finish in a wide variety of materials.

Usage Wood, plastic and aluminum

Material SW HW CW

See Selection Guide - pg. 2 - 12

HELIX ANGLE ≈ 24°

81-000

Double Flute - High Speed Steel Lo Helix

These lo helix upcut spirals were developed for CNC routers used primarily in the aircraft industry. They are designed with maximum strength of configuration to cut T, O or combined stacks of aluminum-using coolant.

Usage Aluminum

Material  See Selection Guide - pg. 2 - 12

Part Number	Cutting DIA	LoC	SHK DIA	OAL	Helix	ALUM Condition

81-003	5/16	3/4	1/2	3 1/16	10°	C

81-100

Double Flute - Solid Carbide Spiral Extrusion Cutters

Designed for reduced vibration producing smoother finish cuts. Extended reach during side thinning and gage reduction. Longer tool life to reduce tool changes.

Usage Extrusion and sheet aluminum.
Optimized for use on multi-head extrusion mills CNC mills and routers

Material  See Selection Guide - pg. 2 - 12

83-300

Double Flute - Solid Carbide Coated Upcut Spiral for Stainless Steel

Special cutting geometry is required to cut stainless steel and achieve decent tool life. LMT Onsrud has developed a line of cutters which are capable of cutting stainless steel.

Usage Stainless Steel

Material  See Selection Guide - pg. 2 - 12

Note Use with MQL is preferred

Solid Carbide CFRP Drill (Coated)

The CFRP drill is designed to ensure hole quality and diameter. The “W” point of the drill centers the drill to let the peripheral cutting edges shear the material producing a clean, tight tolerance hole without fraying or delamination. The drills are coated with a Diamond Like Carbon (DLC).

Usage Carbon Fiber Reinforced Plastics, Kevlar® and Composites

Material  See Selection Guide - pg. 2 - 12

**NEW**

DFC Aerospace Composite Drill (ACD)

Carbon Fiber Reinforced Plastic (CFRP) drills produce a clean tight tolerance hole without fraying or delamination. Top-quality point grind ensures fiber shearing and prevents delamination on hole entry and exit. Enhanced diamond coating to protect cutting edges resulting in less tool changes.

Usage Carbon fiber and other composite materials

Spoilboard Surfacing Cutters

Designed for surfacing MDF, particleboard and balsa core where "flow through" or "high flow" fixturing is employed using large capacity vacuum pumps. This method of surfacing spoilboards allows for much faster table planing.

Usage Aluminum, plastics and composite wood

Material SP HP A CW

See Selection Guide - pg. 2 - 12

STRAIGHT

Part Number	Cutting DIA	SHK DIA	SHK LGTH	# of Flutes
91-000*	1-1/4	1/2	1-1/2	2
91-102	2-1/2	1/2	2	2
91-106	4	3/4	2-1/4	3

* = Carbide Tipped

Note: 90-002, 90-004, 90-006 & 90-008 use 91-125 insert and 91-130 screw
90-014 use 91-127 insert and 91-130 screw

UP-SHEAR

Part Number	Cutting DIA	SHK DIA	SHK LGTH	# of Flutes

91-112 ²	2-1/2	1/2	2	3
91-114 ²	4	3/4	2-1/4	3

² Radius edges excellent for plastic and aluminum surfacing.

These tools are dynamically balanced and approved for use on CNC routers. Max RPM 18,000 1/8" Depth of cut MAX.

** DOC = Maximum Depth of Cut Proper running speed for*

- 2-1/2" diameter tools should be fed at 200-600 IPM at 12,000-16,000 RPM.
- 4" diameter tools should be fed at 200-600 IPM at 12,000-14,000 RPM.

** Do Not Exceed 1/8" Depth Per Pass*

Part Number	Description
91-125	Insert 10/pk
91-127	Radius Insert 10/pk
91-130	Screw M4 (Old Version)
91-133	Screw M5
91-136	Wrench (T20)

TAKE IT ON

Cutting Tool Accessories

LMT Onsrud's mission is to provide cutting tool solutions that exceed our customers' expectations. Many times the solution also includes accessory products, such as cleaners and collets.

33-00

Fiber Adapter Bushing

Used to downsize the bore for smaller shank diameters. Bushings are not recommended for production routing. They should be used only as a temporary substitute for the proper size collet.

Usage Temporary collet downsizing

Part Number	OD	Hole	Length
33-01	1/4	1/8	1-1/4
33-02	1/4	3/16	1-1/4
33-03	1/2	1/4	1-1/2
33-04	1/2	5/16	1-1/2
33-05	1/2	3/8	1-1/2

33-21

Cleaning Solvent & Rust Protector

RUST FREE™ is a cleaner designed to provide a simple solution to your collet cleaning needs. Use T-9™ to protect parts from rust and corrosion. Designed to be used after RUST FREE™ – use on collets and tool holders.

33-10

Collet Brush Kit

Part Number	Description
33-10	Collet Brush Kit (Includes 4 Brushes in Tube)
33-15	1/4" Brush
33-16	3/8" Brush
33-17	1/2" Brush
33-18	3/4" Brush
33-19	1" Brush
33-25	Collet Brush Kit (Includes 5 Brushes in Tube)
33-28	Brass Brush

33-30

Tool Extender

Designed to increase the overall reach of 3/8" and smaller router bits. These extensions are used mainly on CNC routers when routing three dimensional parts.

Part Number	EXT OAL	SHK DIA	SHK LGTH	HEAD DIA	COLLET	NUT	WRENCH
33-30	5	3/8	4	1/2	ER8	34-720	34-760
33-32	6-9/16	1/2	5-1/2	5/8	ER11	34-721	34-761
33-34	6-1/4	5/8	5-1/2	5/8	ER11	34-721	34-761
33-36	7	1/2	5-1/2	7/8	ER16	34-722	34-762

Ultra High-Speed ER Coated Nuts

Use RH-B nuts for applications where speeds exceed 15,000 RPM's to maintain tool balance. RH-B series nuts are manufactured to the closest tolerance for ultra high speeds. The eccentric ring is perfectly round and all parts of the nut are totally ground.

- Reduce TIR by increasing holding power!
- Increase tool life by up to 20%
- Available for 60,000 rpm spindles

TAKE IT ON

Technical Information

LMT Onsrud has over 70 years of experience routing/machining a wide-range of materials. LMT Onsrud's strengths are extensive engineering resources and technical expertise and service. LMT Onsrud has the deep, solution-based knowledge of how to solve complex problems.

Technical Data

TOOL SELECTION

TOOL MATERIAL

- Solid Carbide: Primarily used in CNC operations. Material provides best rigidity and long tool life.
- Carbide Tipped: Incorporates the wear resistance of carbide and the toughness of a HSS body-mainly hand held.
- HSS: Primarily used in hand routing. Material provides a tough body and sharper cutting edge.
- PCD: Long life in abrasive materials.

FLUTE GEOMETRY

- Straight flute: Offers a neutral cutting action - highest force.
- Upcut flute: Provides the best surface finish and allows for good chip extraction.
May cause part lifting if vacuum or fixturing is not sufficient.
- Downcut flute: Provides a downward force which helps eliminate part lifting. Chip rewelding
MAY occur if there is no space below the part for chip expansion.
- Compression: Used for laminated materials, produces a good top and bottom finish on the part.

NUMBER OF FLUTES

- Single Flute: Allows for larger chiploads in softer materials
- Double Flute: Allows for better part finish in harder materials.
- Multiple Flutes: Allows for an even better part finish in harder materials.

Note: As the number of cutting edges increase, your feed rate should increase to prevent burning and premature tool dulling.

OPTIMIZING SPEED AND FEEDS

1. Start off using the recommended chipload and RPM for the material you are cutting.
2. Increase the feedrate until the part finish starts to decrease or you risk moving the part off the vacuum. Decrease the feed by 10%.
3. Next decrease your RPM by a set increment until your surface finish deteriorates again. Once this happens increase your RPM until the finish is acceptable.
4. You have now optimized your speed and feed by taking the largest chip possible.

Note: This should be done in the first sheet of material to prevent tool dulling due to excessive heat.

TOOL HEAT

If a feed rate is too low, heat will be generated causing the cutting edge to break down and dull quickly. To check this, run a nest of parts and stop the spindle. When the spindle has stopped rotating, carefully feel the tool's temperature. It should be at or near room temperature. If the tool is hot, review "Optimizing Speed and Feeds".

Technical Data

FIXTURING METHODS

FLOW THROUGH VACUUM

This style uses LDF (Low Density Fiberboard) or MDF (Medium Density Fiberboard) as a sacrificial surface for sheet material to be cut on. The porous nature of LDF or MDF allows vacuum to pass through allowing the material to be held in place for machining. As parts are cut out of the sheet material, vacuum loss starts to occur from the slot produced by the cutting tool. This can lead to part lifting or movement especially in small parts. Cutter diameter will also influence part movement. A 1/2 diameter tool will exert 25% more lateral pressure than a 3/8 diameter tool.

When cutting small parts in sheet material, one may want to consider tab or skin cutting to prevent part movement.

DEDICATED SPOILBOARD

Dedicated spoilboards are used for reoccurring production runs where optimal cycle times are needed. This work holding method creates vacuum chambers in the sacrificial board specifically to the shape of the parts being cut. This elimination of vacuum loss relates to improved cycle times and part finish.

STEPS TO CREATE A DEDICATED SPOILBOARD:

1. Surface both sides of your MDF board.
2. Lay out the part pattern on the MDF and determine quantity that will fit.
3. Cut the part profile into the MDF board using a larger diameter tool than would normally cut the part.
Make your slot depth 1 to 1.5 times the cutter diameter.
4. A gasket groove must be cut next inside the part profile to create a vacuum seal. The groove should be 1/2 the gasket material thickness to allow for proper compression.
5. A grid pattern must then be cut inside the gasket groove to distribute the vacuum evenly through out the vacuum area.
6. Drill holes throughout the pattern in the intersections of the vacuum grid until there is no resistance on your vacuum gage on the machine table.
7. Seal the board using rubberized coatings, polyurethane sealers or a sanding sealer to prevent vacuum from passing through the board in unwanted areas.
8. Apply the gasket tape.

Proper Spoilboard Techniques

These operations sound time consuming. It will be for your first board. Once you become familiar making these fixtures, you will make up for it in your cycle time reductions and part finish. A lot of headaches and problems can be resolved by using the proper work holding.

RAISED SPOILBOARD

This is generally used where secondary operations are needed and the spoilboard will interfere with the secondary tool.

Raised spoilboards are another type of fixturing that works well for routing parts such as circles from squares where the scrap or fall off is of such a size to be potentially harmful to the tool and or operator when it is cut free. A raised spoilboard should make sure the fall off would not interfere with the first and second tool and that the fall off would be free and clear of the tool path.

SURFACING SPOILBOARDS

When creating new fixtures or using a new MDF sheet, the spoilboard must be surfaced to level the board to the machine table. This consists of using a large diameter cutter (91-100 series) to quickly level the entire surface.

The following benefits will be achieved by surfacing your spoilboard:

- Leveling material to get consistent cuts.
- Remove grooves caused by routing.
- Reduce vacuum loss due to clogged pores at the material surface due to dust and chips.
- Preventing material warpage caused by humidity.

Technical Data

COLLETING

COLLET LIFE SPAN

Collets have a life span of 3 months if used 8 hours a day. Replacing the collets will ensure your operation runs consistently and prevents tool breakage. When inserting a tool into the collet make sure the flute fadeout does not enter the collet. This will cause run out and potentially lead to tool breakage. To ensure proper clamping, the tool shank should fill, at the minimum, 80% of the depth of the collet. If this can not be achieved, use a collet life plug (34-50 series) to ensure a proper clamping effect.

COLLET MAINTENANCE

Cleaning is an essential part of collet maintenance. As material is cut it causes the collet, tool holder, collet nut and spindle to become dirty. This causes your tool to cut in an elliptical fashion which will decrease tool life and cause inconsistency in your operation. Collets, tool holder, and collet nut should be cleaned daily using the Rust Free solvent and a brass brush (33-21 and 33-10 series). Refer to the critical areas diagram to see which surfaces must be clean.

CLEANING INSTRUCTIONS

1. Spray the cleaner on the surface and allow it to soak for a minute.
2. Use a brass brush to clean the surface thoroughly.
3. Rinse off using distilled alcohol. Feel the surface using your fingers to make sure the surface is clean.
4. Apply a small amount of Lubricant T-9 (33-21 series) to prevent rusting.

TOOL BREAKAGE

If a condition arises where multiple tools should break, follow these steps to solve your problem:

1. Are you using the proper tool for the job?
2. Make sure your collets and tool holders are clean and the tool is colleted properly.
3. Check your speed and feed (is your tool hot?)
4. Is your depth of cut too excessive for the material you are cutting?
5. Do you have any part movement?
6. Do you have ample part hold down?
7. Stop running parts and check with your distributor or LMT Onsrud's Technical Support.

If you have to contact your distributor or Technical Support, have the following information:

1. Machine being used.
2. Material being cut.
3. Part number of tool along with the batch number which is below the part number etched on shank of tool.
4. Speed / Feed / Depth of cut.
5. Where did the tool break (flute, shank, or in the collet)?
6. How long did the tool work before it broke?
7. Have you done this operation in the past using this tool?

* = 12,500 RPM

NOTE: To eliminate rewelding increase the feedrate or change to a single edge tool.
 If using a downcut spiral and chip rewelding occurs, cut a slot in your spoilboard to allow the chips a place to expand.
 Incorrect chiploads can lead to knife marks occurring.

FORMULAS: Chip Load = Feed Rate / (RPM x # of cutting edges)
 Feed Rate = RPM x # of cutting edges x chip load
 Speed (RPM) = Feed Rate / (# of cutting edges x chip load)

DEFINITIONS: IPM = Inches Per Minute

91-100 - See Page 73 for Technical Information

NOTE: When chip rewelding occurs while cutting soft plastic, increase feedrate or go to a single edge tool. Incorrect chiploads can result in cratering.

FORMULAS: Chip Load = Feed Rate / (RPM x # of cutting edges)
 Feed Rate (IPM) = RPM x # of cutting edges x chip load
 Speed (RPM) = Feed Rate / (# of cutting edges x chip load)

DEFINITIONS: IPM = Inches Per Minute

NOTE: *Spindle RPM's generally range from 12,000 - 16,000 for PCD tools when cutting composite materials.

Consider 66-500, 66-900, 67-000, 67-250, 67-500 series tools as a single flute in speed & feed rate calculations.

FORMULAS: Chip Load = Feed Rate / (RPM x # of cutting edges)
 Feed Rate (IPM) = RPM x # of cutting edges x chip load
 Speed (RPM) = Feed Rate / (# of cutting edges x chip load)

DEFINITIONS: IPM = Inches Per Minute

RECOMMENDED STARTING RPMs

DIA	RPM
1/8-3/16	10,000-12,000
1/4	8,000-10,000
3/8	6,000-8,000
1/2	4,000-6,000

LMT Onsrud Terms & Conditions

Shipping - F.O.B. Waukegan, IL. All shipments ground unless otherwise specified.

Claims – Any claims for shortage, damage or loss must be made within 30 days of invoice date. United Parcel Service is a preferred method of shipment because of reliability and ease of tracing problem shipments.

Guarantee - Our products are guaranteed against defects in material and quality of manufacture when used in the proper manner. If tools are returned and found to be defective, we will repair or replace the tools. Continued tool breakage caused by improper tool usage without the knowledge of LMT Onsrud's technical staff is not a condition for return and replacement of such tools.

Errors - LMT Onsrud, LP cannot be held responsible for incorrect parts made with our products due to mislabeling or defect.

Return Goods Policy – No merchandise can be returned without prior authorization. Credit will not be issued for merchandise returned without a return authorization number. Product must be a current revision catalog item in new and saleable condition. All returns subject to a 15% restocking fee or offsetting order of equal value.

Specials - LMT Onsrud, LP has the right to over or under ship by 10% all specials. Special orders less than 10 pieces are subject to +/- 1 piece. Specials and modified tools are not returnable for credit. Specials cancelled will be assessed an in-process charge based on the status of the order and expenses incurred at the time of cancellation. If a special tool has been completed, the tool will be shipped and the price quoted will be billed.

Safety Precautions – Cutting tools should only be used to perform operations that are compatible with the original tool design. Safety glasses and other appropriate safety equipment should be worn by all people in the vicinity of tool use.

Prices & Terms - All prices and terms are subject to change without notice. All orders are subject to acceptance at LMT Onsrud.
